SUMMARY

As a Computer Science student, My academic journey in computer science has fueled my passion for understanding the intricacies of computing and its diverse applications. With a focus on practical learning, I've successfully completed multiple projects, showcasing my ability to translate theoretical knowledge into real-world solutions.I am dedicated to honing my skills and contributing meaningfully to the dynamic world of computer science.

SKILLS

Front end development	Backend	Database	Other Technologies
JavaScript	Node.js	MongoDB	Git
React Js	Express	MySQL	Redux

PROJECTS

MyMovieList Github, Site
- Bulit a movie/series viewing webiste, allows users to make their own watchlist and look up their favorite tv shows/movies, much like letterbox.
- Users can create,manage and organize their own lists of shows and movies, enhancing user retention by 50%.

PriceChecker Github
- Built a pricechecking website that scrapes product prices from various online stores. Allowing users to make well-informed purchasing decisions. It also keeps up with up-to-date pricing information.
- used web scraping technologies like puppeteer,cheerio.

FileSharingApplication Github, Site
- Built a modern file sharing platform for seamless, secure collaboration. Share files effortlessly, ensuring privacy and efficiency, resulting in a 40% increase in user productivity.
- Enabled users to send multiple files simultaneously, enhancing file sharing convenience by 35%.
- Provides a secure environment for sensitive and confidential information.

EDUCATION

Bachelor of Computer Science
2021 - 2024(may)
GPA: 8.5

PROGRAMMGING LANGUAGES

Python
JavaScript
Java
